

The Wet Pack System shown here includes a CP-2102 Compactor raised 4" that is equipped with a Pinning/Boost Override System and a Pinning Tunnel Mounted on the Ram Face; it also includes a Compaction Container with an Adjustable Sealed Door and a Raised Compaction Opening, Pinning Tunnel and Binder Pockets to Match the Compactor

Wet Pack Systems

- **Available On Most SP Industries, Inc. Stationary Compactors**
- **Replaces Self-contained Compactor/Containers, In Most Installations, With Lower Tare Weights and Greater Payloads**
- **The Compactor Can Be Raised 4" or More To Increase the Receiver Container Liquid Containing Ability & Capacity**
- **An Elevated Chamber Floor and Baffle Plate Stops Liquids From Seeping Out the Back of the Compactor**
- **An Extended Compaction Snout Helps to Keep Liquids and Material Inside the Container Compaction Opening**
- **Safety Guarding is Placed Around the Base to Protect Personnel from Moving Parts**

Wet Pack System Optional Advantages

- (Forward sloping floor: Liquids flow into the container reducing leakage and odor problems
- (Baffle Plate at the back of the compactor floor is at a forty-five degree angle to contain liquids and virtually eliminate trash buildup behind the ram
- (Receiver/Container door opening is four or more inches higher than standard, with a full adjustable door seal; this combination creates a liquid sump capacity of 1,000 gallons or more in a 40 cubic yard capacity receiver/container
- (Pinning/Boost Override System with a Pinning Tunnel: This feature allows the refuse hauler to eliminate 95% of the spillage when disengaging the container
- (Equipment Meets or Exceeds Current ANSI and OSHA Regulations for Safety
